File: USPT

Aug 14, 2001

DOCUMENT-IDENTIFIER: US 6274320 B1

TITLE: Method of sequencing a nucleic acid

Detailed Description Text (53):

Through the use of the RCR reaction, a strand may be generated which represents many tandem copies of the complement to the circularized molecule. For example, RCR has recently been utilized to obtain an isothermal cascade amplification reaction of circularized padlock probes in vitro in order to detect single-copy genes in human genomic DNA samples (see Lizardi, et al., 1998. Nat. Genet. 19: 225-232). In addition, RCR has also been utilized to detect single DNA molecules in a solid phase-based assay, although difficulties arose when this technique was applied to in situ hybridization (see Lizardi, et al., 1998. Nat. Genet. 19: 225-232).
